Multilevel Modeling of Educational Data -Ann A. O'Connell 2008-04-01 (sponsored by the Educational Statisticians, SIG) Multilevel Modeling of Educational Data, co-edited by Ann A. O'Connell, Ed.D., and D. Betsy McCoach, Ph.D., is the next volume in the series: Quantitative Methods in Education and the Behavioral Sciences: Issues, Research and Teaching (Information Age Publishing), sponsored by the Educational Statisticians' Special Interest Group (Ed-Stat SIG) of the American Educational Research Association. The use of multilevel analyses to examine effects of groups or contexts on individual outcomes has burgeoned over the past few decades. Multilevel modeling techniques allow educational researchers to more appropriately model data that occur within multiple hierarchies (i.e.- the classroom, the school, and/or the district). Examples of multilevel research problems involving schools include establishing trajectories of academic achievement for children within diverse classrooms or schools or studying school-level characteristics on the incidence of bullying. Multilevel models provide an improvement over traditional single-level approaches to working with clustered or hierarchical data; however, multilevel data present complex and interesting methodological challenges for the applied education research community. In keeping with the pedagogical focus for this book series, the papers this volume emphasize applications of multilevel models using educational data, with chapter topics ranging from basic to advanced. This book represents a comprehensive and instructional resource text on multilevel modeling for quantitative researchers who plan to use multilevel techniques in their work, as well as for professors and students of quantitative methods courses focusing on multilevel analysis. Through the contributions of experienced researchers and teachers of multilevel modeling, this volume provides an accessible and practical treatment of methods appropriate for use in a first and/or second course in multilevel analysis. A supporting website links chapter examples to actual data, creating an opportunity for readers to reinforce their knowledge through hands-on data analysis. This book serves as a guide for designing multilevel studies and applying multilevel modeling techniques in educational and behavioral research, thus contributing to a better understanding of and solution for the challenges posed by multilevel systems and data.

The Role of the Father in Child Development -LAMB M.E. (ED.). 1981 This work deals with the fathers' influence on and contribution to their children's emotional, intellectual, and social development. It presents a broad-scale review of all we know about paternal influences on the development of the child. Early chapters cover history of fatherhood, images of the father in psychology and religion, and varieties of fathering and father-infant relationships. Succeeding sections examine paternal influences at different stages of the child's life (preschool, school age, adolescence), ethnic differences, varieties of family structure (divorced and stepfathers), unconventional fathers (gay, adolescent, abusive), and adjustment and father-child relationships.
Coping with Breast Cancer -Sharon L. Manne 2008-03-14 This couples-focused group program aims to improve a couple's functioning as a "team" and provides a supportive environment for couples facing similar breast cancer-related issues. Meta-Emotion -John Mordechai Gottman 2013-02-01 This book describes research on the emotional communication between parents and children and its effect on the children's emotional development. Inspired by the work, and dedicated to the memory of Dr. Haim Ginott, it presents the results of initial exploratory work with meta-emotion--feelings about feelings. The initial study of meta-emotion generated some theory and made it possible to propose a research agenda. Clearly replication is necessary, and experiments are needed to test the path analytic models which have been developed from the authors' correlational data. The authors hope that other researchers will find these ideas interesting and stimulating, and will inspire investigation in this exciting new area of a family's emotional life.

Positive Neuroscience -Joshua D. Greene 2016-05-10 How do we thrive in our behaviors and experiences? Positive neuroscience research illuminates the brain mechanisms that enable human flourishing. Supported by the John Templeton Foundation's Positive Neuroscience Project, which Martin E. P. Seligman established in 2008, Positive Neuroscience provides an intersection between neuroscience and positive psychology. In this edited volume, leading researchers describe the neuroscience of social bonding, altruism, and the capacities for resilience and creativity. Part I (Social Bonds) describes the mechanisms that enable humans to connect with one another. Part II (Altruism) focuses on the neural mechanisms underlying the human ability and willingness to confer costly benefits on others. Part III (Resilience and Creativity) examines the mechanisms by which human brains overcome adversity, create, and discover. Specific topics include: a newly discovered nerve type that appears to be specialized for emotional communication; the effects of parenting on the male brain; how human altruism differs from that of other primates; the neural features of extraordinary altruists who have donated kidneys to strangers; and distinctive patterns of brain wiring that endow some people with exceptional musical abilities. Accessible to a broad academic audience, from advanced undergraduates to senior scholars, these subjects have generated a fascinating and highly convergent set of ideas and results, shaping our understanding of human nature.

Beyond Classical Pedagogy -Terry Wood 2014-04-04 The emergence of the National Council of Teachers of Mathematics Standards in 1989 sparked a sea change in thinking about the nature and quality of mathematics instruction in U.S. schools. Much is known about transmission forms of mathematics teaching and the influence of this teaching on students' learning, but there is still little knowledge about the alternative forms of instruction that have evolved from the recent widespread efforts to reform mathematics education. Beyond Classical Pedagogy: Teaching Elementary School Mathematics reports on the current state of knowledge about these new instructional practices, which differ in significant ways from the traditional pedagogy that has permeated mathematics education in the past. This book provides a research-based view of the nature of facilitative teaching in its relatively mature form, along with opposing views and critique of this form of pedagogy. The focus is on elementary school mathematics classrooms, where the majority of the reform-based efforts have occurred, and on the micro level of teaching (classroom interaction) as a source for revealing the complexity involved in teaching, teachers' learning, and the impact of both on children's learning. The work in elementary mathematics teaching is situated in the larger context of research on teaching. Research and insights from three disciplinary perspectives are presented: the psychological perspective centers on facilitative teaching as a process of teachers' learning; the mathematical perspective focuses on the nature of the mathematical knowledge teachers need in order to engage in this form of teaching; the sociological perspective attends to the interactive process of meaning construction as teachers and students create intellectual communities in their classrooms. The multidisciplinary perspectives presented provide the editors with the necessary triangulation to provide confirming evidence and rich detail about the nature of facilitative teaching. Audiences for this book include scholars in mathematics education and teacher education, teacher educators, staff developers, and classroom teachers. It is also appropriate as a text for graduate courses in mathematics education, teacher education, elementary mathematics teaching methods, and methods of research in mathematics education.

A Patch of Green-Sydney Sharpe 2002 The Wiebo Ludwig affair brought to the forefront the often explosive relationship between the oil and gas industry and the ranchers and farmers who live under the shadow of its rigs. But behind the headlines, an unreported sea-change is taking place in the long history of these very different players. Canada's petroleum industry is in the middle of a massive paradigm shift. The old focus of drill fast, pump profits, leave quick is long gone. New executives and directors are bringing a mentality of corporate and social responsibility to the industry that pays attention to a triple bottom line: environmental, social, and economic. A Patch of Green examines the forces that have come to bear to bring about this change. From the viewpoints of environmentalists, landowners, drill workers and corporate executives, veteran journalist Sydney Sharpe reveals an industry wrestling with the excesses of its past and learning to profit from a new economic future.

Stand Firm-Paul Gould 2018-11 In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty and meaning. Stand Firm: Apologetics and the Brilliance of the Gospel argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.

Exploring the Dynamic Earth-Michelle K. Hall 2006-07-01 Specifically designed to work in your site-licensed ArcGIS laboratory, the GIS Investigations for the Earth Sciences is a collection of modular investigation guides that let even novice users tap the power of the ArcGIS software to explore, manipulate, and analyze large data sets. Carefully designed and class tested, the guides emphasize the visualization, analysis, and multimedia integration capabilities inherent to GIS. The guide leads students through a set of exercises in which they are asked to explore, analyze, and then elaborate on the information extracted from a robust GIS dataset using your laboratory's ArcGIS software. The GIS information has been preprocessed into maps and legends, and some procedures have been automated so students can focus on the science content. The complete GIS datasets needed to work through each module are available exclusively online and have been designed to be uploaded into the ArcGIS application already installed in your laboratory. By focusing on teaching with GIS rather than teaching about it, you can incorporate GIS easily into homework, discussions, or lab sessions. This flexible teaching resource motivates and enables your students to "learn by doing" as they use a full complement of GIS capabilities. Each module in the GIS Investigations series complements any introductory course in geology, meteorology, oceanography, physical geography, natural hazards, Earth sciences, atmospheric science, and Earth systems science.
